

JavaScript Syntax

- comment: lines of code that JavaScript will intentionally ignore.
 - `// This is a comment.`
 - `/* This is a comment. */`
- semicolon: In JavaScript ending statements with a (;), is a matter of personal/team preference. [Read more.](#)
- JavaScript is case sensitive.

Single line comment

`// This is a single line comment.`

- Example of single line comments
- JS Code

```
// This is a single line comment
```

```
alert("We are learning JavaScript single line comment");
```

```
//alert("Good Morning.");
```

Multiple line comments

in JavaScript multi-line comments start with `/*` and end with `*/`.

Example of multiple line comments

- JS Code

```
/* Multiple line comments start here  
  
alert("Good Morning");  
  
Multiple line comments end here*/  
  
alert("We are learning JavaScript multiple  
line comments.");
```
