

JavaScript

Data Types

Two Kinds of Data

- **Primitive** : A primitive is simply a data type that is not an object, and has no methods.
- **Object**: An object is a collection of properties. These properties are stored in key/value pairs. Properties can reference any type of data, including objects and/or primitive values.

Primitive Data Types

Strings (represents textual data)

Number (numbers of any kind)

Boolean (logical type)

Null

Undefined

Symbol
